

Improved Fire Safety and Compliance for Care Home Residents

Objectives

Restore compromised fire compartmentation following renovation, ensuring full compliance with current building regulations while prioritising resident safety through certified systems and close client collaboration.

Challenges

Disrupted compartmentation in roof voids, vulnerable residents on site, and maintaining strict health, safety and cleanliness standards during intrusive remedial works.

Solutions

Conducted intrusive surveys, frequent site inspections and installed certified Firefly cavity closers and Zeus Lite 90:30 systems to reinstate compliant fire-rated compartmentation.

Outcomes

1. Restored Fire Safety Compliance

Fire compartmentation fully reinstated, achieving up to 90-minute integrity and meeting current building regulations.

2. Enhanced Resident Safety

Fire and smoke risks eliminated, providing greater protection and peace of mind for residents and staff.

3. Assured Quality & Oversight

Regular site visits, safety checks and coordination ensured high standards, compliance and incident-free delivery.

Our Commitment

Thanks to the measures Meritas took, the care home has now been brought back in line with fire safety standards, ensuring compliance and most importantly, enhancing the safety and peace of mind for its residents and staff.
